

Best selection of urban and architectural most innovative and sustainable concepts and projects

WT SmartCity Award 2024

International urban and architectural design prize

WT SmartCity Award 2024, an international award for urban and architectural design that recognizes the most innovative solutions in terms of design, accessibility, sustainability and quality of life. The aim of the award is to encourage the development of new urban scenarios addressing the crucial aspects of sustainability, density and urban complexity by proposing forward-looking and visionary architectural scenarios. Chiara Cantono, architect at the head of WT Studio, is convinced that concrete actions of innovative architectural design, supported by environmental policies, should be planned in order to significantly improve the environmental conditions of our territory, considering that the Metropolitan City of Milan is demonstrating the will to transform itself into a real citizen-friendly "Smartcity".

Palazzo Moriggia via Borgonuovo 23 Milano

Prize Giving Ceremony - 17 April h.17.00
